MARKETSCAN STUDIES

Abbreviated Bibliography

Since 1988, healthcare researchers have used Truven Health MarketScan® data to understand disease progression, treatment patterns, health outcomes, and their associated costs to patients, employers, health plans, and the government. Fully HIPAA compliant, the MarketScan databases are the gold standard in proprietary databases used for healthcare research in the United States. They are the basis of over 700 peer-reviewed articles published in leading journals since the first article appeared in The New England Journal of Medicine in 1990 (J.B. Hillman et al.). MarketScan-based research has made a substantial contribution to the body of literature used to formulate policy decisions and improve healthcare for Americans.
